Data leakage grades and retrieval scores

All 240 frozen queries of **memecap_eval_v1**, with the leakage verdict and gate metrics stored for each one, the graded qrels, and the first-relevant rank and average precision of every strategy on the same 6,378-image gallery.

Answer to the request

Yes. Every one of the 240 frozen queries has a stored data-leakage verdict in `metadata.leakage`, and **240/240 pass** the gate. The graded qrels and the per-query retrieval scores are printed in the register below.

Query set	Value
memecap_eval_v1	240 frozen queries — 80 visual, 80 intent, 80 metaphor
Leakage verdicts	240/240 PASS · 0 FAIL · max 8-gram overlap 0 · max shared span 4 · max Jaccard 0.50
Graded judgments	339 judgments — 240 grade 2 + 99 grade 1 (15 visual queries carry grade-1 near-duplicates)
Retrieval scores	mAP A 0.4395 · B 0.7608 · C 0.4519 · gallery 6,378 · depth 100

- **What "grade" means here.** Each query has two independent records: a leakage verdict (PASS/FAIL plus the gate metrics) and one or more relevance grades (grade 2 = the source meme, grade 1 = a deterministic near-duplicate).
- **Scores are per query.** The register shows each strategy's first-relevant rank (`miss` when nothing relevant is retrieved) and AP. Per-candidate similarity scores are not stored in the reports, so they are not shown.
- **Diagnostics excluded.** The `*_raw_captions` reports are leaky by construction and are a separate labelled diagnostic; they never enter this table.

Sources: `data/eval/memecap_eval_v1.json` · `data/eval/memecap_eval_v1.qrels.jsonl` · `data/reports/compare.json`. Every number is read at build time; nothing is typed in by hand.

1. How to read the grades

Leakage gate

- A query is rejected if an **8-gram** overlaps any annotation field of its source *or of any gallery image*.
- It is rejected if it embeds a whole short annotation (**≥ 4 tokens**) — no 8-gram can catch a 3-word caption pasted verbatim.
- It is rejected if it shares a contiguous run of **≥ 5 tokens** with its source caption, or if its token **Jaccard ≥ 0.6** (no length floor).
- Verdicts are stored per query in `metadata.leakage`; on this set all 240 pass, so every row reads PASS.

Relevance grades

- **Grade 2** is the source meme itself — exactly one per query.
- **Grade 1** is assigned only by deterministic rules: a visual query whose other image has caption Jaccard ≥ 0.8; an intent query with identical normalized intended meaning; or a metaphor query sharing a specific label (document frequency ≤ 10) with a similar meaning. No model judges relevance.
- On this set, 15 visual queries carry grade-1 near-duplicates (99 judgments); intent and metaphor queries have one grade-2 image each.

Metric semantics

- **rank** is the 1-based position of the first relevant image (grade 1 or 2); **AP** is average precision over the 100-deep ranked list. Both treat grade 1 and grade 2 as equally relevant.
- **nDCG@10** (summarised, not per row) is the only graded metric: it uses gains `2**grade - 1`.
- Retrieval depth is `max(top_k, largest relevant set, 100)`; top_k is 1/5/10 and the largest relevant set is 19, so every list is 100 deep.

2. Summary by category

Category	Queries	Leak PASS	Max 8g	Max span	Max Jac	Grade 2	Grade 1	mAP A	mAP B	mAP C
visual	80	80/80	0	4	0.500	80	99	0.3153	0.6313	0.2469
intent	80	80/80	0	4	0.353	80	0	0.4444	0.7389	0.5390
metaphor	80	80/80	0	4	0.353	80	0	0.5588	0.9121	0.5697
total	240	240/240	0	4	0.500	240	99	0.4395	0.7608	0.4519

All 240 queries pass the leakage gate. Max 8-gram overlap is 0 in every category; the longest shared span is 4 tokens (below the 5-token copy limit); distribution: 0 on 54, 2 on 98, 3 on 63, 4 on 25. The highest Jaccard is 0.500, below the 0.600 threshold. Grade-1 judgments exist only on visual queries.

Worked example: q0001 (visual)

a robed ancient man with a halo clutching a small cup of wine

Leakage: PASS · 8-gram 0 · span 0 · Jaccard 0.200. Qrels: G2 1, G1 0. A: AP 0.071, rank 14 · B: AP 0.500, rank 2 · C: AP 0.333, rank 3.

3. Per-query register (240 queries)

Rows are in qid order, which is also category order: q0001–q0080 visual, q0081–q0160 intent, q0161–q0240 metaphor. **Leak** is the stored verdict; **8g**, **span** and **Jac** are the 8-gram overlap, longest shared source span and token Jaccard, respectively. The `contained`, `gallery_contained` and `strict_overlap` flags are 0/false for all 240 queries. **G2**/**G1** count the graded qrels. **AP** and **rank** are the per-query retrieval scores for A clip, B clip_nlp and C vlm.

Table 1. 240 frozen queries; all 240 pass the data-leakage gate. AP is rounded to three decimals in this table; the reports retain four.

4. Provenance

Source artifact	Role
data/eval/memecap_eval_v1.json	240 frozen queries with **metadata.leakage** and the graded qrels
data/eval/memecap_eval_v1.qrels.jsonl	339 judgments (240 grade 2 + 99 grade 1), a flattened export of the same grades
data/reports/compare.json	per-query rank and AP for A/B/C; generated 2026-11-01T15:12:38+00:00; gallery 6,378 images; top_k 1/5/10; seed 42
